 Odometer
165,654 miles

 Original Battery Capacity
70 kWh

79

Range Score: Fair

Range Score provides an estimate of how far this vehicle may drive on a full charge today versus when it was new.

-  Estimated Range Today
186 - 188 miles
-  Estimated Range in 3 Years
177 - 178 miles
-  Original EPA Range
234 miles

Seasonal Range

Your likely range in the typical weather for Los Angeles (90063) is 141 - 180 miles.

Insights

Range is likely to be lowest in January and December

We use thousands of observations from other Tesla Model Ss to predict your most likely Real-World Range as the distance between full charges in your local weather conditions.

Battery Warranty Estimate

The warranty typically begins on the vehicle's original sale date. Our estimate is based on the vehicle year and reported odometer. Confirm the remaining warranty with the seller.

! Warranty may be expired

This vehicle may have exceeded its 8 years of coverage.

📅

Coverage Duration

8 years or unlimited miles

Batteries and powertrains are often covered by their own warranties.
